

## PRESS RELEASE

**Telos Corporation to include eNitiatives.com's ViewDS technology as a component of its Web-based secure organizational messaging system**

**Ashburn, Virginia, USA, and Melbourne Australia, 10<sup>th</sup> January 2011:** Telos Corporation, a US-headquartered supplier of secure, advanced technology solutions to the U.S federal government, and eNitiatives Pty Ltd of Australia, an innovative developer of Defence and Security compliant directory server technologies, have signed an agreement for Telos to incorporate eNitiatives' advanced ViewDS technology into its secure organizational messaging solution.

**eNitiatives.com Pty Ltd** is the developer of the renowned **ViewDS** high speed identity and messaging repository, and has pioneered world-leading searching and matching technology unique in the identity management and directory services market.

**Telos Corporation** is the developer of the Web-centric Automated Message Handling System (AMHS), which is a leading messaging solution for the U.S. Department of Defense as well as civilian government agencies and U.S. allies around the world.

The advanced features of the ViewDS technology led **Telos** to select it to be a component of the AMHS solution. Messages sent using AMHS are encrypted or decrypted at the AMHS server so users do not have to manage the complexities normally involved in message security protocols.

**Mike Masters**, Vice President of the secure messaging solution area for Telos Corporation said "This partnership of two innovative technology leaders will target the global implementation of Telos AMHS especially in the European and Asia Pacific markets. I expect an increase in customer satisfaction because of the additional capability that will be brought to market as the result of this collaboration."

**David Rolls**, Chairman of eNitiatives commented. "We have been working closely for some months with Telos Corporation as they exhaustively evaluated the ViewDS technology, and we are delighted that our technology met their exacting requirements. ViewDS will be a component of the Telos AMHS secure messaging solution".

**Andrew Ferguson**, Director International Business Development for eNitiatives said "We are very excited about the relationship, as it will reinforce the global potential for our products. We see huge potential for ViewDS being realised through this partnership. We will work together not only to support the Telos AMHS system but also to explore North American, European (NATO) and Asia Pacific opportunities for Identity Management."

### **About Telos Corporation**

Telos Corporation has provided innovative IT solutions and services to the US Federal Government for more than 30 years, focusing since 1997 on cybersecurity. Telos solutions ensure that the government's most security-conscious organizations comply with demanding Federal and DoD information security mandates. Offerings include Xacta® IA Manager for enterprise IT security management, enterprise security consulting services, secure networks, secure enterprise messaging, and secure identity management solutions. Solutions are

represented to the federal government on Telos' GSA schedule. For more information, visit <http://www.telos.com/>.

**About eInitiatives.com Pty Ltd**

eInitiatives is a privately-owned company with headquarters and R&D in Melbourne Australia. It is a spin-off from eB2Bcom who previously owned and developed the ViewDS technology. eInitiatives has been operating separately since July 2009 with a strategy of forming partnerships with organizations such as Telos to address global and specialist markets. ViewDS is used by organisations in USA, Europe; SE Asia, Middle East and Australia. For more information on ViewDS visit <http://www.viewds.com>.
